#### 4 Axis CNC Hot Wire Foam Cutter

4 Axis CNC Hot Wire

Supplementary Telecommunications Power

Log Splitter Design

Figure: CNC Foam Cutter

- Designed and built a low cost prototype CNC foam cutter for rapid prototyping of wings and blades.
- Utilises low cost NEMA 17 stepper motors, ardunio mega and 3D printing hardware and modified firmware.
- Wrote command line interface CAM application in C for wings and blades (ongoing).

Log Splitter Design

# Supplementary Telecommunications Power

- Designed and built foam core composite wind turbine blades, utilising the CNC foam cutter.
- Optimised and validated blades using my own programs and the QBlade simulation software.
- Designed and built a data collection system using an ardunio uno.

Figure: Wind Turbine

Click here to see a video of the wind turbine being tested.

Log Splitter Design

## Log Splitter Design

- Designed, modelled and produced AS1100 drawings for the log holder.
- Modelled the log splitter parts and produced AS1100 drawings.
- Created an animation utilising mechanisms within PTC Creo.
